Bishop's Stortford Urban District Council

Public Health Department,
The Council House,
Bishop's Stortford,
July, 1964

To the Chairman and Members,
Bishop's Stortford Urban District Council

Mr. Chairman, Ladies and Gentlemen,

We have the honour to submit the following Report for the year 1963, on the health of the Bishop's Stortford Urban District which has been drawn up on the lines indicated in the Circular issued by the Ministry of Health.

The Registrar General's estimated mid-year population of 20,070 shows an increase of 480 over last year. This compares with an increase of 640 during 1962.

Compared with the previous year there was a fall in the birth rate, the death rate and the infantile mortality rate. The decline in the death rate and infantile mortality rate is encouraging. There are a number of ways in which the health of the Community can be assessed, but vital statistics remain perhaps the most reliable indicator.

The department was heavily committed during the early part of the year by an outbreak of Sonne Dysentery which occurred in the North-East part of the town. This was brought under control by the end of April only to be followed by the Typhoid outbreak at Harlow and although no actual cases of Typhoid were notified in the Urban District a great deal of work was involved in the checking of numerous contacts. Further details of both these outbreaks are given later in this report. 444 cases of Measles were notified during the year but this follows the usual bi-annual pattern of this disease.

Dr. E. M. Harrison resigned as Medical Officer of Health on the 24th August, 1963 after a period of 13 years service. Dr. Harrison left to study for a further diploma at Manchester University and we would like to record our appreciation of her service to the town.

Mr. R. C. Brown, Pupil Public Health Inspector, who qualified during 1962 was successful in gaining the diploma in the Inspection of Meat and Other Foods. He resigned his appointment on the 30th June, 1963 to take up a post as Additional Public Health Inspector with the Dunmow Rural District Council. We wish him well in his new appointment. Miss S. M. Cooper was appointed to succeed Mr. Brown and took up her duties on the 16th September, 1963. Mrs. S. Drew resigned as Clerk/Typist on the 31st January, 1963 and was succeeded by Mrs. R. Waters, who commenced her duties on the 18th February, 1963.

We wish to express to the Chairman and Members of the Council and to all our colleagues our grateful thanks for all the help and support we have received.

We are,

Your obedient Servants.

I. G. Yule,

Medical Officer of Health

A. L. GOOD,

Chief Public Health Inspector

SECTION A

Provision of Medical Services

General Practitioner Services

These are provided by three practices, one being a large practice involving seven practitioners in one central premises, another with three practitioners partly working in a central surgery and also in two more outlying surgeries, and a third single practitioner practice based in a central surgery.

Five Dental practices exist in the town and on the whole it appears that the demands for treatment are being satisfactorily met.

Pharmaceutical services are adequate and the more outlying housing areas now have an accessible pharmaceutical chemist.

Hospital Services

These are provided at the Bishop's Stortford and District Hospital (68 beds) and the Herts and Essex General Hospital (397 beds). The former is staffed by General Practitioners, Consultants and a Resident Medical Officer and is a training school for State Enrolled Nurses. Facilities are available for treatment of medical, surgical, ear, nose and throat diseases, obstetrical and gynaecological, orthopaedic and paediatric illnesses. In addition there is a Physical Medicine and Radiology department.

The Herts and Essex General Hospital has steadily continued to expand and improve its facilities and much progress has been made in the past few years in creating new departments and modernising the buildings. The hospital is a training school for Nurses and Midwives and is medically staffed by Consultants, Registrars and House Officers. There are specialist departments in medicine, surgery, obstetrics and gynaecology, paediatrics, physical medicine, dentistry and oral surgery, orthopaedics, ear, nose and throat diseases, dermatology, tuberculosis and diseases of the chest, opthalmology, psychiatry and venereal diseases. There is also an excellent pathological service.

Hertfordshire County Council Health Services

The Home Nursing and Midwifery services were fully occupied and with a growing population the demands made

on them continued to increase. The Health Visitors continued to supervise the health of children under 5 in the homes and also school children at school medical inspections in conjunction with the School Medical Officer.

Clinics are held regularly at the Health Centre, Market Square. Clinic facilities are provided for ante-natal care, infant welfare, child guidance, speech, dental and orthodontic care, minor ailments and chiropody.

Home Help facilities are also available for those needing them on the advice of a Doctor or Health Visitor.

Voluntary Organisations

The Family Planning Association hold clinics regularly at the Herts and Essex General Hospital.

The W.V.S. provide a Meals-on-Wheels Service to housebound elderly people and this service is generously subsidised by the Council.

The Old People's Welfare Committee do much towards alleviating the problems of the elderly people in the town.

N.B. The numbers on the extreme left refer to the International Classification of Causes of Death. Where no deaths have been recorded, the entry has been excluded.

MORTALITY TABLE—MAIN CAUSES OF DEATH

The total of 198 deaths during 1963 represents a decrease of 24 deaths from the previous year. This gives a crude death rate of 9.86 per 1,000 population, and the adjusted rate, which takes into account the effect of the age structure of the local population on the number of deaths, is 9.26 per 1,000. These figures compare very favourably with the mortality rate of 12.2 per 1,000 recorded for England and Wales.

These four major groups are thus responsible for four out of five deaths. Degenerative diseases of blood vessels and various forms of cancer are now firmly established as the chief causes of death. In general this is the result of the greater proportion of old people in the population and the diminished importance of infectious diseases, as causes of death, particularly in younger people.

Diseases of the respiratory system are still responsible for many deaths, and also for a great deal of non-fatal but disabling disease. Atmospheric pollution and the smoking habits of the population are important factors associated with the high incidence of respiratory disease in this country. Smoke pollution is fortunately not a very serious problem in Bishop's Stortford compared with some of the highly industrial areas but the recordings of pollution made by the Health Department over a number of years show that we are not entirely free from this hazard.

The number of deaths from cancer of the lung and bronchus continue to increase both in Bishop's Stortford and nationally. They must serve as yet another stern warning of the long term danger of cigarette smoking. Lung cancer is now responsible for four times as many deaths as road accidents.

INFANTILE MORTALITY

There were five deaths of children under 1 year giving an infant mortality rate of 11.2 per 1,000 live births. The infant mortality rate for England and Wales is 21.1 per 1,000 live births. The numbers concerned in Bishop's Stortford are however small and in these circumstances one or two additional

infant deaths can cause a considerable alteration in the mortality rate. There is therefore no room for complacency but it is nevertheless very pleasing to be able to record an infant mortality rate which is nearly half the national figure. Three of the infant deaths occurred within the first month of life and there were seven stillbirths. These figures confirm that the greatest loss of infant life is at or about the time of birth when conditions such as prematurity, congenital malformations and infection present a severe hazard to the infant.

SECTION C

Prevalence of and Control over Infectious and other Diseases

(1) Notifiable Diseases

Notifications of the following infectious diseases were received during the year:

Disease	All Ages	Under 1 year	1 - 2	3 - 4	5 - 9	10 - 14	15 - 24	25 - 60	Over Sixty
Acute Lobar Pneumonia Infective Hepatitis Measles Para-Typhoid B Scarlet Fever Sonne Dysentery Tuberculosis Whooping Cough	3 1 444 1 3 72 8 43		1 78 - 7 7	117 116 10	21	3 11 — 8 —	5 - 4 2 1	5 1 -23 5 3	1 - - - 1
Disease	Jan. Feh	Mar.	Apr.	May	June	Aug.	Sept.	Oct.	Dec.
Para-Typhoid B Scarlet Fever	81 111 - 111 20 2 2 2 2 2 2 2 2 2 2 2 2 2 2 2 2	1 0 100 - - 5 15 - -	 57 -1 12 1			7 8 7 - 1 - 4 1 - 7	12	1 - - - 1 1 1 6 -	

The incidence of notifiable infectious diseases showed a considerable increase from the previous year, notifications being particularly heavy during the first six months associated with outbreaks of measles and dysentery. Later in the year there was a small outbreak of whooping cough and 43 cases were notified.

The high incidence of measles is in keeping with the usual 2 year cycle of this disease which depends on the build up of susceptible people in the community. Measles may be complicated by ear and chest infections in young children and there is not yet a widely available method of immunisation against this disease though considerable work is being done in this field.

The outbreak of sonne dysentery in the North-East part of the district early in the year created heavy demands on the staff. The 72 cases came from 43 families and in addition to arranging for specimens to ensure the clearance of these cases, contacts in the immediate household and where necessary other close contacts were checked, together with food handlers and school staff contacts. The outbreak necessitated 446 visits by the Public Health Inspectors and 480 specimens were submitted to the Cambridge Public Health Laboratory for bacteriological examination. There is no doubt that the careful clearance of cases and contacts together with an insistance on the highest standards of hygiene did much to limit the spread of the outbreak.

Although the disease is usually fairly mild it is highly contagious and spreads from hand to hand often by contamination from doors, lavatory seats, etc. Hand washing after using the toilet and before handling food is of the greatest

importance in limiting the spread of infection.

There was also a substantial rise in the number of cases of whooping cough notified. Immunisation against this disease although it does not give absolute protection does ensure, in the great majority of cases, a considerable reduction in the severity of the infection. It also helps to prevent the very young child from contracting the disease, and it is at this age that the danger of serious complications are much greater.

It is again pleasing to record that no cases of diphtheria or poliomyelitis occurred in the district during the year. These diseases still present a danger to the community however as outbreaks of infection occurring from time to time in various areas of the country serve to remind us. The importance of maintaining a high level of diphtheria immunisation and

poliomyelitis vaccination cannot be over emphasised.

The district also remained free from small pox during the year. The danger of an outbreak of small pox in this country is, however, still present, particularly with the development of world-wide air travel. Experience in the past has shown that routine vaccination of all infants is an essential preventive measure in the control of this disease.

Although there were no cases of typhoid or food poisoning in the area, the typhoid outbreak in Harlow in June necessitated contact tracing and the submission of specimens from contacts to ensure that any spread of the disease was prevented. It also served as another reminder of the need for strict hygiene particularly among those preparing and handling food. The single case of para-typhoid notified was contracted whilst the person concerned was on holiday on the Continent.

(2) Tuberculosis

Cases on Register at 31.12.63	21	4	19	6	50

(3) National Assistance Act, 1948. Section 47

This section gives power for the removal to suitable premises of persons who are suffering from grave chronic disease, or being aged, infirm or physically handicapped or living in unhealthy conditions are unable to devote to themselves, and are not receiving from other persons proper care and attention. This power is fortunately rarely required and is only used in very extreme circumstances; whenever possible attempts are made to provide services and assistance so that the person can remain in his own home. It was found unnecessary to take action under this section during the year.

(4) Refuse Collection and Disposal

The tipping of refuse in the Town Meads was discontinued at the end of April, the Council having entered into an agreement with Braughing Rural District Council for tipping facilities at Hadham Towers. The facilities at Hadham Towers were made available for an initial period of 5 years and in view of the rather long haul to the new tip the Council purchased two new 50 cu. yd. Pakamatic vehicles for this purpose.

(5) Water Supply

The report of the Public Analyst in respect of a sample of drinking water taken from a house in the town is given below.

CERTIFICATE OF ANALYSIS

CERTIFICATE OF THIRALISIS		
Physical Characters	Good	
Reaction	pH 7.0	
THE SAMPLE CONTAINED:-	parts	per 100,000
Chloride		2.7

Number of micro-organisms per m		
developing at 21°C		nil
MICROSCOPICAL EXAMINATION OF DEPOSIT		

None

INFERENCE

The results obtained on the analysis of this sample do not show any evidences of pollution with harmful organic or inorganic matter.

I am of the opinion that this water is fit for drinking

purposes.

S. Greenburgh.

7th March, 1963

Public Analyst.

38 samples of drinking water were submitted to the Cambridge Public Health Laboratory for bacteriological Three samples of drinking water were also examination. submitted to the Public Analyst at Cambridge for chemical and bacteriological examination. All samples were reported upon as satisfactory.

Drainge and Sewerage

The Minister of Housing and Local Government held a Public Enquiry in November into the Council's proposal to construct a new gravity sewer from Southmill to a discharge point at the Rye Meads Disposal Works. A technical investigation was also held by the Minister immediately following the Public Enquiry and this was in connection with the construction of a new sewer down the valley from Cannonsmill to the Causeway. The provision of this new sewer was considered necessary by the Council's Engineer and Surveyor in order to relieve the pressure on the Cannonsmill Lane Pumping Station which was apparently becoming overloaded. The Minister's decision on both schemes is still awaited.

(7) Swimming Pools

107 samples of water were taken from the five swimming pools in the district and submitted for bacteriological examination.

Details of the results of all samples, are given in the table below.

Citation of Book	No of	Results o	f Samples
Situation of Pool	No. of Samples	Satisfactory	Unsatisfactory
Council Pool, The Causeway Chantry Mount	45	45	_
School, Whitehall	24	24	_
Thorley Hill Junior and Infants School	9	7	2
College — Indoor Pool, Maze Green Road College — Outdoor Pool, Maze Green	7	7	_
Road	22	18	4
TOTAL	107	101	6

The small number of unsatisfactory samples shown in the above table point to the very high standard which is maintained in the swimming pools, and the routine spot checks which are taken to determine the residual chlorine level and the pH value of the water prove to be most effective.

(7) Disinfection and Disinfestation

364 properties were disinfested and 312 wasp's nests were destroyed during the year.

(8) Atmospheric Pollution

The National Survey of air pollution has now been in operation for a sufficient period to enable comparisons to be made between sites of similar classification. Table I gives a summary of the observations for the year ending 31st March, 1962 for Bishop's Stortford and for sites in the same classification. It will be seen from this table that Bishop's Stortford has the lowest concentration of Sulphur Dioxide for the year and this is most encouraging, indicating as it does that the amount of industrial pollution is very low.

The difference in the pattern of smoke and sulphur dioxide emissions can be useful in comparing the pollution observed at different sites, and also seasonal variations. In

summer, domestic pollution is at a minimum and the industrial element in a "mixed" area predominates, tending to give a low smoke/SO2 ratio. Thus, the variation of this ratio Thus, the variation of this ratio between summer and winter should give an indication of the part industry plays in the pollution of a particular site. In an area with a high proportion of industry the ratio would be low throughout the year, although it might rise on those days when domestic smoke is carried into the area on the wind.

Table I NATIONAL SURVEY OF AIR POLLUTION

CONCENTRATIONS EXPRESSED IN MICROGRAMMES PER CUBIC METRE

B.C. — Borough Council. U.D.C. — Urban District Council. R.D.C. — Rural District Council.

Site Classification

D/2 — Small town centre; limited commercial area mixed with old residential housing and possibly minor industry.

D/2E — Small town centre; limited commercial area mixed with old residential housing and possibly minor industry; smoke control area.

A study of the smoke/SO2 ratios for Bishop's Stortford shows a high winter ratio and a low summer ratio which reveals the fact that there is room for improvement by way of a reduction in the amount of domestic smoke production.

Table II shows the average concentrations for smoke and sulphur dioxide at both stations in Bishop's Stortford since investigations commenced locally. The steady though small reduction in the yearly average concentrations of smoke presents a very hopeful sign. The figures are all the more striking when it is realised that the number of houses within the half-mile radius of Number 1 station has risen from 2,116 in 1960 to 2,336 in 1963, a 10 per cent increase. The greater use of various types of Central Heating and the advent of the modern room heaters have clearly played a major part in this welcome reduction in smoke pollution. The removal of smoke from the air lets through more of the sun's heat which sets up convection and so increases the dispersion of other pollutants harmlessly into the upper air.

Table II

(9) Inspection and Supervision of Food

(a) FOOD HYGIENE

The high standard of food hygiene was maintained throughout the year and as a result of the routine inspection of food premises 156 improvements were effected. The need however for constant supervision of all food premises forms a vital part of the day to day work of the department and these efforts must not be relaxed.

(b) MARKETS

The regular weekly inspection of the street and covered markets and the cattle, rabbit and poultry markets was continued throughout the year. Here again a high standard has been maintained.

(c) MILK SUPPLY

Fifty-six samples of bottled milk and 23 samples of cream were taken in course of delivery to the consumer during the year and submitted to the Cambridge Public Health Laboratory for bacteriological examination. All the samples were reported upon as satisfactory, details of which are shown in the table.

Designation	No. of Samples Taken	No. Satis- factory	No. Unsatis- factory
Pasteurised Milk Tuberculin Tested Pasteurised Milk Sterilised Milk Cream	 12 27 17 23	12 27 17 23	=

(d) Manufacture and Sale of Ice-Cream

Sixty-eight premises are registered for the storage and sale of ice-cream and this represents an increase of two over the previous year.

Bacteriological Examination

16 samples of ice cream were submitted to the Cambridge Public Health Laboratory for bacteriological examination. The results of samples are detailed in the table below. Grade 4 samples are regarded as unsatisfactory.

	No. of	Results of Samples					
	No. of Samples	Grade 1 Grade 2		Grade 3	Grade 4		
Ice Cream	16	11	5		_		

14 samples of ice lollies were also taken and all were reported upon as satisfactory by the laboratory.

(e) MEAT AND OTHER FOOD INSPECTION

Ten premises are registered under the Food and Drugs Act, 1955 for the preparation and manufacture of preserved food as follows:—

rood as rono						
Sausages						5
Sausages and Brawn	• • •	• • •	•••	•••	• • •	2
Sausages and Cooked I	Meats	•••	•••	•••	•••	1
Meat Pickling	•••	• • •	• • •			1
Cooked Hams						- 1

Meat inspection duties on behalf of the Dunmow Rural District Council were undertaken at the private slaughter-house, Little Jenkins, Great Hallingbury, during the months of January, February, March and April, this work being taken over by the Dunmow Rural District Council with effect from the 20th April, 1963. Details of the carcases inspected and condemned are given in the appropriate table.

(f) MISCELLANEOUS FOOD SAMPLING

Thirty-seven samples of various foods were submitted for bacteriological examination to the Cambridge Public Health Laboratory and all were reported upon as satisfactory.

The types of food sampled were chocolate flavoured drink, evaporated milk, grapefruit, lamb tongues, lard, orange drink, pineapple pieces and yoghourt.

(g) DISPOSAL OF CONDEMNED FOOD

The total amount of food condemned during the year was 6.6076 tons compared with 1.7933 tons in the previous year. The unsound food was disposed of under supervision on the Council's controlled tip and full details are shown in the appropriate tables. The large increase in the amount of food condemned is accounted for by the fact that 2,869 lbs. of bananas which were delayed in transit became affected by frost; 4,239 lbs. of potatoes were also delayed in transit and became unsound and 2,005 lbs. of frozen foods were found to be unfit as a result of breakdowns in frozen food cabinets

(10) Rodent Control

(i) Disinfestation of Sewers

The sewers in the district have not revealed any evidence of serious rat infestation over a period of some years and it has not been found to be necessary to carry out any treatment. However, test baiting will be undertaken as soon as possible.

(ii) Disinfestation of Surface Propert	ties	Proper	face	Sur	of	festation	Disin	(ii)

,,	Bodies recovered (a) rats	 313
,,	,, ,, (b) mice	 77

Total number of visits made by the operator 1,803 Rats and mice were more in evidence during the year and this called for an all round intensification of the work of the Rodent Operator. The Rodent Control service however continues to function efficiently and smoothly.

(11) The Storage of Petroleum Spirit

Sixty premises were licensed by the Council for the storage of petroleum spirit and the fees received in respect of these licences amounted to £46 0s, 0d.

(12) The Provision of Dustbins

261 dustbins were provided by the Council during the year, making a total of 6,071 dustbins supplied since the

scheme was put into operation in July, 1954.

The 3rd, 4th and 5th stages of the paper sack system of refuse collection and disposal were introduced during the year in the Twyford Park, Newtown and Hockerill areas, covering some 2,885 properties in all. The Council agreed to complete the changeover from dustbins to paper sacks with the introduction of stages 6 and 7 during the year 1964/5. Stages 6 and 7 cover the Parsonage Lane, Cannons Close, Kings Court and Town Centre areas which involve approximately 2,350 properties. The speeding up of the paper sack system is wise and will enable the full benefits both from the financial and health point of view to be fully implemented at an earlier date.

(13) Pet Animals Act, 1951

Three licences were renewed by the Council during the year in respect of the keeping of pet shops.

(14) Factories Act, 1961

Twenty-eight visits were made to the factories on the register and it was found necessary in one instance to serve an informal notice. The number of factory inspections carried out during the year was low compared to the factories on the register and it is hoped to increase the number of visits substantially in the near future.

Thirty-one outworkers were employed during the year by the various factories in the district, a decrease of 2 over the previous year.

Part I of the Act

1. INSPECTIONS for purposes of provisions as to health

	Number	Number of

(15) Housing

Number of new houses erected during the year:—

(a) By the Local Authority Nil

(b) By Private Enterprise 143

Number of houses made available by conversion or adaptation of existing buildings ... 4

HOUSES DEMOLISHED

The houses listed below were demolished during the year. 13, 19, 32, 39, Firlands. 52, 54, 56, London Road.

Houses Closed

The following unfit houses were closed during the year. 13, 19, 32, 39, Firlands.

Gate Cottage, Twyford Road.

HOUSES MADE FIT AFTER FORMAL ACTION BY THE LOCAL AUTHORITY

Housing Act, 1957, Section 16 3 Apton Road.

Houses Made Fit after Informal Action

Seventy-four houses were rendered fit by the Owners during the year, following informal action by the Local Authority. 829 housing defects were remedied as a result of this work and this is a satisfactory achievement. There is still a bottle-neck in housing repair work due to the shortage of builders willing to undertake this type of work; there were however, signs at the end of the year that the position was improving slightly.

(16) The Caravan Sites and Control of Development Act, 1960.

A site licence was issued by the Council during the year 1962 in respect of a site at Start Hill Farm. The site is well maintained on which a four-berth caravan is stationed. The conditions were found to be satisfactory and no contraventions were observed during the year.

(17) Houses in Multiple Occupation.

A Pilot Survey of some 10 houses used in multiple occupation was carried out during the year in order to give a typical cross section of this type of house in use in the Urban District. A full report was submitted to the Health Committee in November, 1963 following the completion of the Pilot Survey and the Committee approved recommendations made in connection with the provision of additional services and facilities and the standards to prevent or reduce overcrowding. The County Fire Protection Officer is to be consulted in all cases and his recommendations with regard to means of escape from fire will be implemented.
